Mapping Application for LARC Study Abroad Program

Abstract

Language Acquisition Resource Center (LARC) is a national Language Resource Center at San Diego State University which has many international programs. Project GO funding is one of them, where SDSU students travel to different countries for Study Abroad courses. Managing and maintaining the students activities manually, involves many resources and is a tedious and time consuming process. My thesis will help to easily ship this to dynamic way by using forms, ArcGIS, Moodle and other relevant tools. It will enable the students and teachers to view the activities of other students. They can view the location on map along with the other information. This will be an attempt to keep the students and teachers in constant touch and share the experiences about the location they have visited. All these features simplify and accelerate the need to have a better communication outside class room.
