

Title – Business Software Implementation Specialist

Company – Lascom Solutions is a software product and services company specializing in developing Product Lifecycle Management (PLM) software for food and consumer device manufacturing sectors. Using its well established configuration management software, Lascom helps food manufacturers manage their product specifications by centralizing their data in a single source. Using a custom integration with Excel, the software is able to manage the product's formula and generate the product's nutrition, ingredient statement and labeling information. The software enables companies to automatically generate product specifications, submit for approval and integrate the product data with their ERP system.

Headquartered just outside Paris France, Lascom's North American and Pacific operations are managed out of the San Diego office. Lascom Solutions has been located in San Diego since 2001.

Job Function – The candidate will work in a team to implement customer projects. The ideal candidate will be able to work in a fast pace, fluid environment with the ability to multitask. Juggling several projects at once is a must. The candidate will be a junior member of the team and will be able to learn from experienced professionals. The primary responsibility is to implement PLM software projects, which include interacting with customers, installing server based software, modifying Word or Excel templates using macros, importing data and providing customer support. The candidate may need to develop custom software to import data or modify web form or report, however, this is a minor portion of the candidate's responsibility. This is not a software engineering position. This is an excellent opportunity for an intelligent, ambitious person to learn new skills and start their career as the company continues to grow.

Responsibilities – The responsibilities of the candidate will change depending on the project. Project tasks are managed using Agile Scrum methodology. Responsibilities may include the following:

- Develop product specification templates in MS Word
- Populate PLM system with customer's data
- Import data using Excel templates
- Modify VB macros in Excel formulation template
- Create custom documentation
- Perform software testing
- Fix customer defects
- Use Microsoft Visual Studio to develop and maintain custom code
- Work with customer to define requirements
- Install software on customer's server
- Some travel to customer (U.S. and possibly international) may be required

Skills – The ideal candidate must be familiar with software development and implementation processes. The Lascom team will be able to provide training.

The candidate should possess the following skills:

- Excellent verbal/written communication skills
- Knowledge web based software code using HTML, ASP, CSS, JavaScript
- Knowledge of with Microsoft .NET Framework including C#
- Knowledge of Microsoft IIS Web Server
- Be able to perform SQL queries
- Create software test plans
- Develop using VB macros
- Understand XML structure
- Familiar with Project Management including Microsoft Project
- French language knowledge is a plus

Work Experience - Entry level, 0-3 years of experience.

Education - Bachelor's degree or college senior in Information Systems, Computer Science, or related field.

Local Candidates Only

Lascom does not sponsor individuals for the purpose of obtaining H-1 visas
