

My name is Matt Emmert, and I work with the National Leader in K-12 computer science education, Code To The Future. Our program is research-based, and has been successful in a diverse set of environments throughout the country- ranging from Title I schools in El Cajon and Boston to affluent schools in Santa Barbara.

We have an immediate need to hire 1 or 2 high-quality College/Masters students to work with us in the greater San Diego area this year. These students will teach K-8th grade students, working anywhere from 2-40 hours per week (depending on their availability). In addition to competitive monetary compensation, we offer an extensive training program using the teacher rubric we've developed to train teachers in factors such as classroom management, instructional strategies, etc. Extensive prior experience in computer science is NOT required, as our training program gives teachers the knowledge they need. The opportunity for experience in the classroom is ideal- the teachers we select from your school will actually be the teacher, not an aid or an observer (though there will be opportunities to observe as well).

Please email Matt Emmert if interested. matt.emmert@codetothefuture.com
