Mobile App Developer
Tie-In - San Diego, CA

Company Description:
Tie In is a student startup company here at San Diego State University. We have a great idea for an app based product that will change the way students experience college. We’re a small but hard-working team who are determined about our idea’s becoming a reality.

Job description:
- Help develop a new app from the ground up
- Have an instinct for new fresh ideas about user friendly app navigation
- Good communications skills
- Have an interest in building an app in which we connect students with each other

Project Stage: Planning and design
Devices: iOS and Android platforms

Desired skills and experience:
- Experience in developing, debugging, maintaining, and launching native iOS (Objective-C, Cocoa, xCode) and/or Android (Java, Eclipse or Android Studio, Android SDK) applications (preferably both!).
- Experience provisioning and publishing apps including ad hoc releases, app review processes, final releases, and ability to lead in the build and release process. Show us apps you helped deploy on the App Store or Google Play.
- Experience integrating with APIs (HTTP, SMTP, OAuth, Facebook Connect, JSON, etc.), with a preference for location-based services such as mapping, GPS, and dispatching technologies.
- Other desirable experience: system architecture, cloud computing, server scripting, real-time synchronization issues, and other web technologies. Familiarity with Microsoft software stack (.net, C#, Azure, etc.) a plus.

Qualities that we look for:
- Write clean and well organized code
- Creative solutions to problems and thinking outside the box
- Be resourceful to find solutions to problems
- The ability to learn new technologies as we grow
- Ability to be conscious of timelines

If this position interests you and you believe that you are a good fit, please send us your resume with a brief note telling us about yourself and why this position is perfect for you.
