Permanent opportunity for Entry Level Java Developers:

We are currently looking for recent MS Computer Science grads for a permanent salaried Java Development role with a major health care company in San Diego and Campbell, CA (Silicon Valley).

In this role you will be working with the software engineering team to continue to add industry leading features to our client's flagship product. Our client provides innovative products and solutions that allow different systems to exchange health information, improving patient care, lowering costs and enhancing revenue.

As a Java Developer, you will design and develop in a highly collaborative, fast-paced environment. Your role is to design innovative solutions to real problems. You will work closely with product owners, scrum master and other software engineers to develop new product offerings and improve existing ones.

About you:

Our ideal candidate has work and or internship experience working with java in an enterprise environment. Desired exposure includes, coding in a multi-threaded environment, writing SQL queries, using databases like MS SQL, Oracle, MySQL, etc., familiarity with a linux environment (redhat, centos), and you have heard of Groovy on Grails and are interested in learning it.

All things considered, any strong core Java developers are welcomed to get in touch. I can be reached at JLipton@kforce.com.

Please note: international students are encouraged to apply as well.
