Skedeto is looking for a front-end developer to code the front-end of a responsive web application. This role would be tasked to take our current visual designs and convert them into markup. This is a project based role that allows the student/alumni to work from home. The role will get paid upon completion of each phase of the project. The scope of work of each phase will be defined by Skedeto along with the mutually agreed upon bill rate.

This is an agile based project to ensure timely delivery. This is a great resume builder and opportunity to work with our team which has years of experience and management of multi-million dollar sites and applications.

Experience in the following areas are highly beneficial:

- Responsive web development using the bootstrap framework
- PSD files to markup
- Web forms and database integration
- Agile project development
- Joomla content management systems

Please send your resume and portfolio to contact@skedeto.com
