Software Quality Assurance Intern

Location: San Diego, CA  
FLSA Status: Non-Exempt  
Position Type: Part Time

The QA Intern will work on a small, fast-moving, cross-functional team focused on delivering enterprise server, web, and mobile application features. The Software QA Intern also will be responsible for planning, creating, and executing manual and automated software test activities.

This is a paid internship for up to 20 hours per week with the possibility of permanently joining our team after a period of time based upon performance and business needs. We will require all work hours to be in the primary office.

Job Responsibilities and Related Duties:

- Work collaboratively with the software development team while participating in the product development cycle
- Work with team members on identifying unexpected site behavior
- Ensure applications are thoroughly tested and meet business objectives
- Develop, document, and execute testing strategies, test cases, and procedures
- Log, track, and close defects throughout the software development process
- Communicate test results to project/product leaders and team
- Develop recommendations based on test results to improve or correct design
- Contribute information based on test results to design, development, and documentation teams and other relevant technical groups

Qualified Candidates should possess the following:

- Minimum 2 years of completed undergraduate coursework in computer science, information systems, mathematics, or other related technical field is preferred
- Recent college grads or candidates with related skills will also be considered
- Experience with either Java, .NET, C# or iOS/Android/Windows Mobile development is preferred
- Experience with Bugzilla and Subversion is a bonus
• Knowledge of/exposure to testing concepts and QA methods preferred

• Knowledge of/exposure to software automation testing tools preferred
