Student Assistant

Database Development Position

We are seeking a seasoned Student Assistant to join our IT team on campus to help with Application Express (ApEx - Oracle database querying/reporting tool) development.

This is not a typical student assistant job, but real development work which would allow you to learn more about

- Relational databases
- SQL
- PL/SQL
- Javascript

Prior years we've been lucky with highly productive intelligent Computer Science students and hope to find another gem now.

Any student with relational database and programming knowledge and experience who will be available 3+ semesters should send their résumé to Mikhail Burnstein at burstein@mail.sdsu.edu
