Custom Forms

Abstract

The focus of this thesis is to create a Custom Forms Application. The Custom Forms Application will concentrate on changing the form field without interference of a programmer and any code changes. An application user can modify the forms depending on business requirement by simply adding a row in the database table. Using the Custom Form Application, an application user can modify object properties without the interference of a programmer. Database schema changes will not be required to save the new property. This Custom Form Application will reduce business overhead by reducing the time and effort required to change object properties.
