Online Portal for San Diego County

Abstract

The purpose of this thesis is to design a platform that helps universities, colleges, employers, and students to interact seamlessly at a single place. All these entities are dependent on each other so that they can grow individually or collectively. Universities need students so that they have people to educate and help with research; similarly companies need talent so that they can produce and upgrade products, and at the same time student needs both these organizations to gather knowledge and then showcase their talent once they hired.

This platform provides organizations various useful communication tools which can successfully remove barricades to going to different places for information, and provide a single stop solution for many needs regarding future events, employment opportunities and much more.

So this thesis is could serve the needs for the county of San Diego with the tools it provides to bring many players to the same platform.

Thesis Committee

Joseph Lewis, Thesis Chair, Department of Computer Science

Carl Eckberg, Department of Computer Science

Rob Malouf, Department of Linguistics and Asian/ Middle Eastern Languages
